

AUTOMATE. INTEGRATE. OPERATE

Transform Your Site Security with Dijital Drones

Dijital Drones brings next-generation drone-in-a-box technology into your security and operations strategy—seamlessly integrating automation, intelligent video, and operational control into a single, unified service offering.

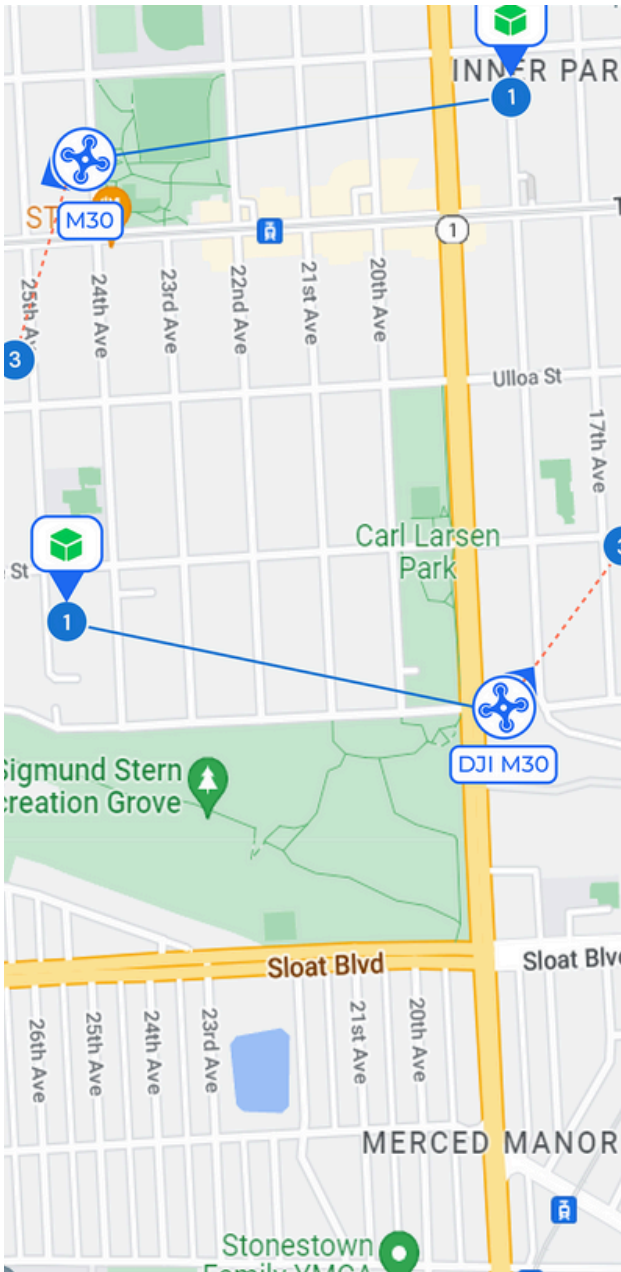

Whether you're securing a remote mining site or a complex multi-building campus, our platform allows you to automate surveillance, integrate intelligence, and operate efficiently — all while ensuring compliance and oversight.

AUTOMATE

Our drone-in-a-box solution enables fully automated drone patrols, scheduled or triggered by events, with no on-site pilot needed.

- **Drone Docking Stations** house industrial-grade drones, ready to deploy 24/7 in all weather conditions.
- **Automated Missions** are pre-programmed and managed via a secure cloud-based platform with remote access and control.
- **Dual Thermal** and **Visual Cameras** deliver full day-and-night visibility, providing actionable insights when they matter most.
- **AI-Driven Intelligence** supports real-time object detection and optimized data streaming, ensuring rapid response to incidents.
- **Scalable** and **Compliant** with built-in air and ground safety protocols, geofencing, dynamic routing, and advanced failsafes.
- **Fleet Management & BVLOS** Support allows multiple drones across various sites to be controlled from a single remote control centre.

From takeoff to landing, your patrols are fully autonomous, reducing manual effort and increasing security coverage without compromise.

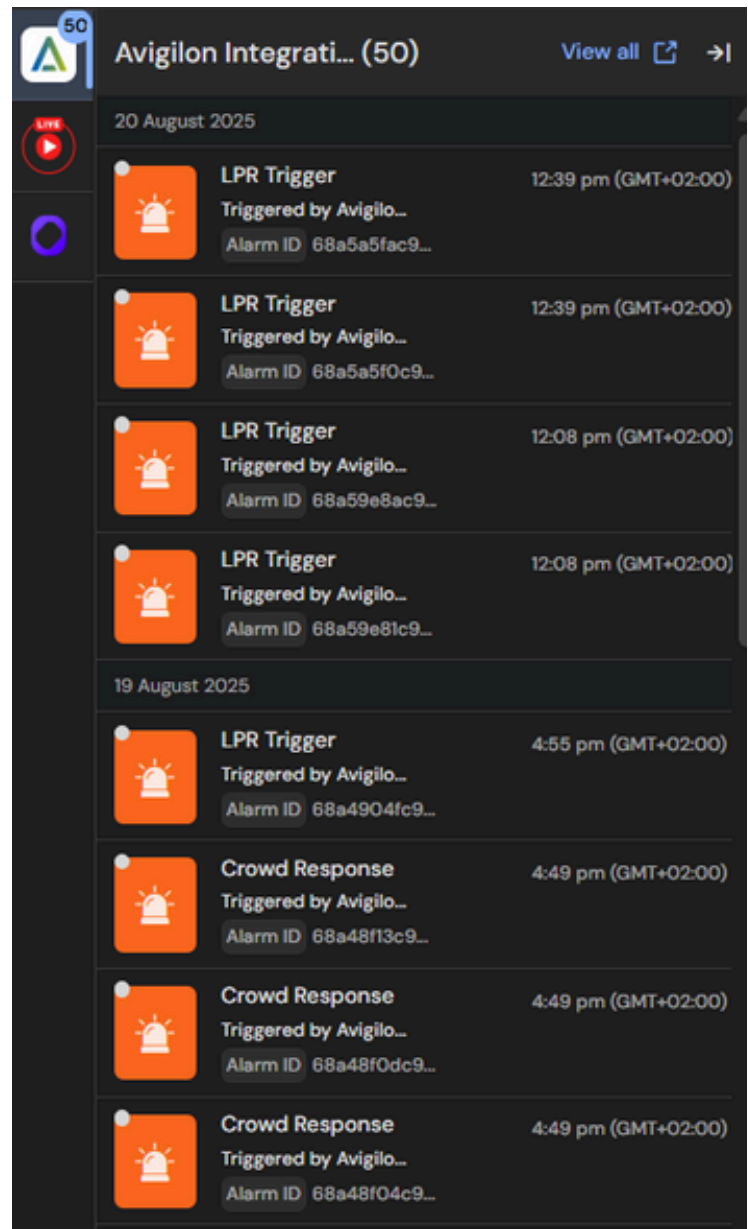

INTEGRATE

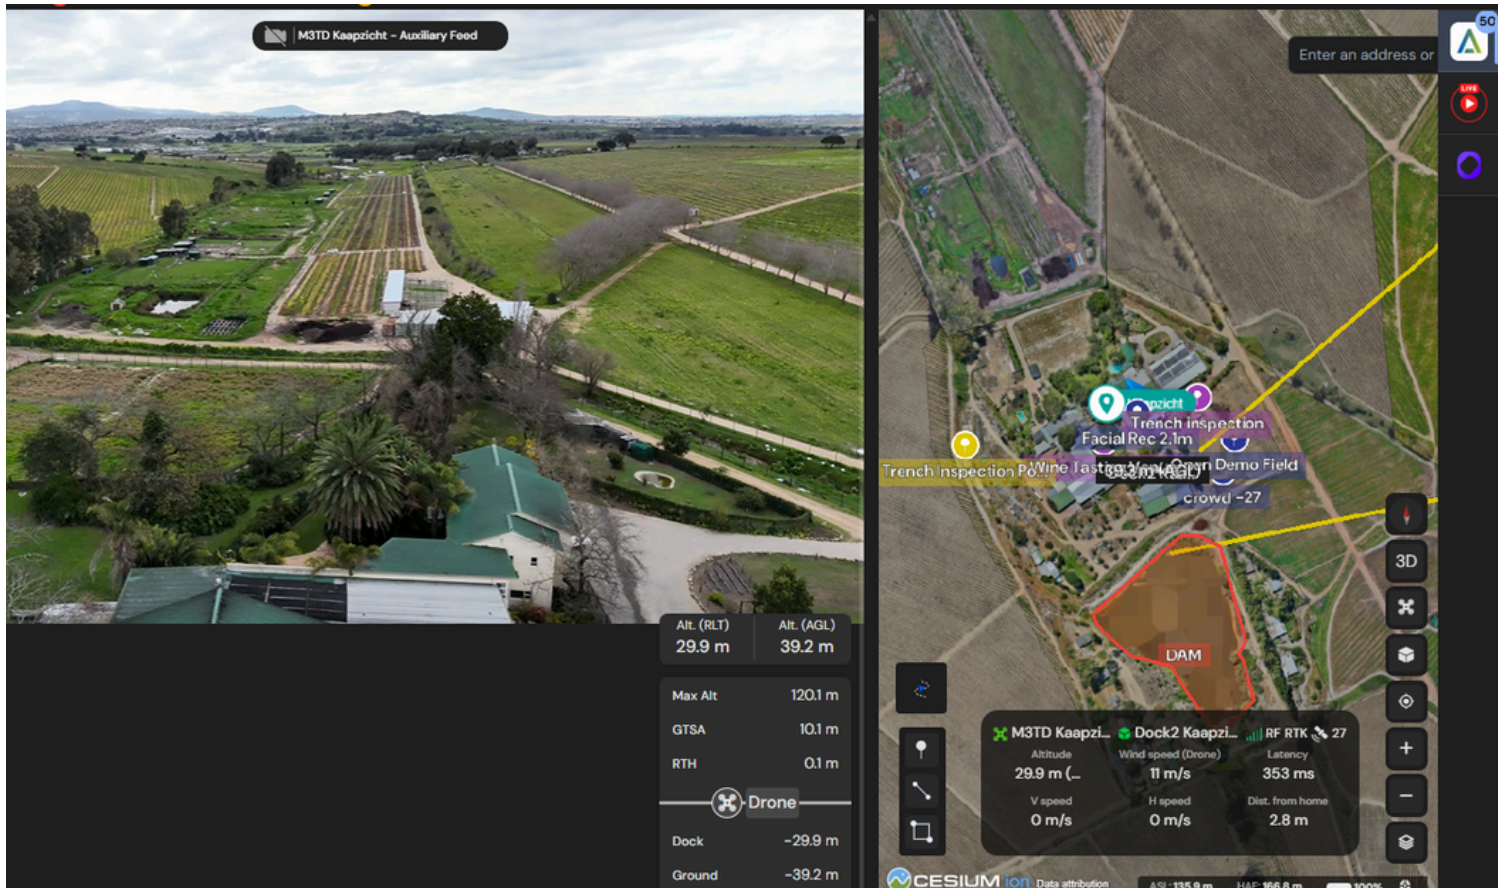

Dijital Drones don't operate in isolation — they become part of your entire security ecosystem.

- **Live Video Integration** into your central video management system ensures drone footage appears alongside your existing camera feeds.
- **Enhanced Capabilities** with VMS Integration when paired with our market-leading video management system, unlock advanced features such as object detection, facial recognition, early fire warning, and license plate recognition — all from a single interface.
- **Two-Way Communication** between drone systems and radio networks enables instant collaboration between operators and field teams.
- **Open API & In-House Integration Expertise** means our drone system can be seamlessly tailored to your environment and integrated with scheduling, dispatch, or any other third-party platforms.

This level of integration extends your visibility, enhances situational awareness, and turns your drone system into a force multiplier.

OPERATE

With Dijital Drones, you don't just buy hardware—you gain a certified, compliant, and fully-managed drone service. End-to-End Managed Drone Service, tailored to your site's layout, risks, and compliance needs.

- **Certified Remote Pilots** oversee all flights from our control center, ready to intervene and assist at any time.
- **Legal Compliance & CAA Approvals** are built in, eliminating the red tape and delays often associated with drone deployments.
- **On-Site Installation & Custom Integration** handled by our experienced technical teams.
- **Maintenance & Optimization** ensure peak system performance and reduce downtime.
- **Operations Support & Reporting** give you visibility into incidents, system performance, and compliance tracking.

We handle the admin, licenses, compliance, and management — you get the insights and peace of mind.

Why Dijital Drones?

- Reduce costs and human error with automated patrols
- Improve situational awareness with integrated intelligence
- Scale across sites with fleet-wide coordination
- Stay compliant with regulatory and safety standards
- Get expert support without increasing your headcount
- Already trusted by leading sites across mining and critical infrastructure.

Applications

Security & Surveillance

- Intruder detection
- Perimeter guarding
- Crowd monitoring and event security
- Public safety and emergency response support

Operations & Compliance

- Asset inspections (fences, pipelines, rooftops, solar PV)
- Change detection (excavation, stockpile shifts)
- Equipment and infrastructure monitoring
- Regulatory compliance verification

Risk Management & Environment

- Fire detection and early warning
- Environmental monitoring
- Health and safety incident verification
- Disaster response

REDEFINING AERIAL SECURITY.
